

# Naval Sea Logistics Center

## ***Change Control Board***

***SLDCADA  
20-21 February 2002***

*Bringing tomorrow's solutions today*

*...as your logistics partner*

# ***Welcome***

---

## ***Karen Buck***

# ***General Project Update***

---

***Karen Buck***

# ***Development Update***

---

***Tim Sledge***

# ***Major Changes & Enhancements 21.4-00 Completed***

# ***Major Changes & Enhancements 21.4-00 Completed***

---

Accrue sick and annual leave for leave availability check.

Add the date and time of certification to the certification listings.

Do not generate holiday, admin, annual, or predetermined labor for employees in LWOP status.

Show regularly scheduled hours for employees on Incorrect Hours Report.

When adding new employees, user must save, close window, and reselect menu choice. Allow for multiple additions.

# ***Major Changes & Enhancements 21.4-00 Completed***

---

Add display of standing JONs and hours on the labor entry screen.

Create a new hours summary report, Employee Summary (All Hours), to display a summary of all hours (e.g., leave as well as regular) recorded for each employee.

Create a new report that lists employees and their predetermined JONs.

Create a new report to display family leave data (used during each pay period, used year to date).

Add the capability to view a group of employees' leave balances on one window instead of having to view each employee separately.

# ***Major Changes & Enhancements***

## ***21.4-00 Completed***

---

Modify SLDCADA to detect when a user has been disconnected, display an appropriate message, and close the application.

Correct login dialogue to properly differentiate between a password that is about to expire, has expired but is still within the grace period for changing, or has expired completely.

Add the work schedule report to the web application.

Add functionality to the T&A window in the web application that is equivalent to the F9 (save data for current employee and move to the next employee) and F11 (skip current employee) function keys in the windows application.

# Family Leave Report

## ***Major Changes & Enhancements 21.5-00***

# ***Major Changes & Enhancements***

## ***21.5-00***

---

Modify SLDCADA to accommodate multiple UICs in the same database.

Add the capability of maintaining limited Employee/T&A information in SLDCADA to meet the CSR's 6-year requirement for saving data.

Implement the elapsed time calculation program in the Oracle version of SLDCADA.

Add the capability of using a smart card with SLDCADA.

# ***Major Changes & Enhancements***

## ***21.5-00***

---

When an employee is no longer current, the employee's access rights and menu code should be set to null and the employee's userid should be deleted.

For biweekly sites, if a user skips an employee's record in T&A (e.g., by pressing the F11 function key), then both weeks of the pay period should be marked as skipped. The skipped timecard report should list each employee only once for the pay period.

Modify the predetermined tabs on the Employee windows to not allow duplicate records.

Do not allow a shop to be deleted or deactivated if there are employees that are currently assigned to the shop.

# ***Major Changes & Enhancements***

## ***21.5-00***

---

Modify the predetermined tabs on the Employee windows to add a new row when the enter key is pressed.

Modify the Advanced Labor window to not allow the use of start and stop dates that are earlier than the beginning of the current pay period.

The effective date field on the Employee windows should be disabled when the windows are in inquiry-only mode.

Modify the certification windows so that the certification button visibility and functionality is consistent between the different windows.

Modify the Employee windows and the Overtime Request and Authorization windows so that deactivated environmental hazard codes do not appear in the environmental hazard code dropdowns.

# ***Major Changes & Enhancements***

## ***21.5-00***

---

Modify the Employee windows so that deactivated shifts do not appear in the shift dropdowns.

Modify the Employee windows so that deactivated work schedule codes do not appear in the work schedule dropdowns.

Modify the F9 and F11 function key functionality on the T&A window so that it will not modify the skipped status if the records for the week have already been certified.

Add the alternate work schedule code to the Employee Work Schedules report.

Add functionality to enforce unique User IDs throughout all SLDCADA databases.

# ***ORACLE***

- **The Navy and Marine Corps currently deploy various client/server applications using an Oracle client that needs to be installed on the PC**
  - ✓ SLDCADA
  - ✓ FASTDATA
  - ✓ MODERN
  - ✓ SPS/PD2
  - ✓ and OTHERS

# ***The Problem***

---

- **Not all the current Oracle applications use the same Version of Oracle.**
  - ✓ The result is that new client installations of Oracle cause the current applications to stop working if not properly installed.

# ***Background***

---

- **Oracle Homes**

- ✓ The ORACLE\_HOME is basically the location in a file structure where a single or set of Oracle products is to be installed. Regardless of where an ORACLE\_HOME is located there is a standard directory structure. Under that ORACLE\_HOME, depending on what products are installed, there will be directories such as bin, orainst, network, lib, etc .

# ***Background***

---

- **Why is the ORACLE\_HOME significant?**
  - ✓ The first product to be installed to an ORACLE\_HOME sets the precedent for that ORACLE\_HOME to be of a specific type. In other words, whatever release of Oracle libraries that a particular application needed, now becomes the common denominator for all other Oracle products to be installed into that ORACLE\_HOME.

# ***Background***

---

- **For example, if the first product to be installed to a particular ORACLE\_HOME was an 8.0.5.X Client, then that ORACLE\_HOME is now based on 8.0.5.X release and as such, only products built and tested against 8.0.5.X libraries should be installed into that ORACLE\_HOME.**

# ***Solution***

---

- **It is highly suggested that each version of the Oracle Client be installed into its own ORACLE\_HOME.**
  - ✓ This not only makes maintenance easier it will allow the deletion of old ORACLE\_HOMES in the event that the version is no longer needed.

# ***Solution***

---

- **SLDCADA for new installations is shipped with full supporting documentation for the Oracle 8.1.6 client installation.**
  - ✓ This CD-ROM includes the following documents:
    - Oracle8i Client Release Notes for Windows  
[HTML](#)
    - Oracle8i Client Installation Guide for Windows  
[PDF](#)
    - Software Installation plan for the SLDCADA Client  
[MS-WORD](#)

# ***Conclusion***

---

- **Network administrators, to prevent previous applications from not working must:**
  - ✓ Familiarize themselves with the current version of Oracle installed before new installations.
  - ✓ Read and understand the contents contained with the installation CD.

# ***Break***

The CCB will resume in

## Debrief

# Users Conference

## Debrief

**SLCDADA User Conferences Nov 2001-Jan 2002**

# ***Users Conference Summary***

---

- **Continue with Web Training, System Enhancements, CSR/Timekeeper Tips**
- **Emphasis on:**
  - ✓ *Break-out sessions by user experience level*
  - ✓ *Keep users informed on DCPS/Payroll status*
  - ✓ *Keep up-to-date on new SLDCADA versions*
  - ✓ *Hands-on training and real-time scenarios*
  - ✓ *Consider on-going system training*

# Training Plan

---

- **Monthly/Quarterly schedule**
- **Held at Yorktown, VA**
- **50-person maximum**
- **Similar to training conducted during Users Co**
  - **NOT hands on**
